

ABSTRACT

A method of storing information in a multimedia integrated receiver decoder arranged to be used with the
5 Multimedia Home Platform standard. First, user commands
input to the integrated receiver decoder are interpreted (110). Then, the user commands are collected
(120) and saved (130) as data items in a database.
Finally, the data items are made accessible to computer
10 applications run on the integrated receiver decoder by
means of an Application Program Interface (140). This
makes it possible for agents to get information on
viewing and box using habits for all channels.
